PROFILE

Software and AI engineer building practical products across web, mobile, and machine learning. Grew up in Nairobi and studied in Istanbul, with a focus on software that works under real user, network, device, and operational constraints.

SELECTED PROJECTS

AI document platform

FastAPI, PostgreSQL, RabbitMQ, Redis, Celery, Docker, Kubernetes

Designed four independently tested services for OCR, background AI processing, semantic search, authentication, events, and observability. Added local fallbacks so core workflows remain usable without external AI services.

MedAssist AI

React 19, TypeScript, FastAPI, PostgreSQL, Docker, AWS

Built a Kenya-first health guidance and clinic operations platform spanning conservative symptom triage, clinic discovery, appointments, medicine ordering, and administration.

Water potability model

Python, pandas, NumPy, scikit-learn

Compared three classification models across 3,276 water samples. Random Forest reached 67.4% test accuracy; documented limitations and the next validation steps.

SafariGo

TypeScript - active private development

Developing a Kenya-focused intercity bus-booking product covering route discovery, live seat state, passenger details, and booking confirmation.

EXPERIENCE

Freelance Software Developer

Self-employed - Remote | 2024-present

Deliver web and mobile projects from requirements and architecture through implementation, feedback, and deployment.

Software Development Intern

Istanbul, Turkey | 2023-2024

Contributed within active development cycles using collaborative workflows, code review, maintenance, and agile delivery.

EDUCATION

BSc Software Development

Istanbul Aydin University | Graduated June 2026

Coursework included artificial intelligence, machine learning, mobile development, cloud computing, testing, algorithms, and system design.

TECHNICAL CAPABILITIES

Applied AI & data	Python, pandas, NumPy, scikit-learn, embeddings, OCR
Product engineering	React, TypeScript, JavaScript, FastAPI, REST APIs
Mobile	Flutter, Dart, Kotlin, Android Studio
Systems & delivery	PostgreSQL, Docker, RabbitMQ, Redis, GitHub Actions, AWS
